

The IMSA Great Minds Program®

Co-Founder, Massachusetts Institute of Technology
Artificial Intelligence Laboratory
Author, The Society of Mind

Why is it that computers still cannot do what our brains can? [Marvin Minsky](#) has been studying this problem for over 20 years, and he believes it is because computers are shackled by constraints we place on them, computers will be able to have motivations and feelings... and consciousness! What are these constraints, and how will removing them release the power of computers?

Wednesday, October 10, 2001 7:30 PM - IMSA Auditorium 1500 W. Sullivan Road - Aurora, IL
Reception and Booksigning followed the lecture.
